Quandong (Jack) Qian

Dallas, TX · +1 (832) 888-6016 · jack@aimanjack.com · linkedin.com/in/quandong-qian-156563191 · github.com/qianquandong · realagentusecases.com/jack · US Permanent Resident (no sponsorship needed)

Target: AI Forward Deployed / Solutions / Operations Engineer — agentic workflows that run on real business systems (ERP, CRM, spreadsheets, Lark, email, SMS, voice) with human checkpoints and explicit failure boundaries.

EXPERIENCE

Business Planner, Supply Chain — Texas Instruments, Dallas, TX — Apr 2026 – Present

- Automated recurring scheduling, order-correction, and reconciliation work (~5 hours/week of manual checking); reports and tools now used daily by planners across 13 groups, with their feedback driving each iteration.
- Scripted SAP GUI with Python (win32com): sales-order scheduling, corrections, and release run end to end in an isolated session, dry-run by default, never touching the live user session.
- Built Selenium form-fillers for 12+ internal request types; each form is left open for human review — nothing auto-submits.
- Replaced manual SAP / Spotfire / Excel cross-referencing with direct SQL against a data-virtualization layer: supply-gap reports, a weekly risk email, and quarterly review decks generated from data.
- Founded a 300-member internal AI community; present these automation playbooks every two weeks.

Industrial Engineer — Texas Instruments — Aug 2023 – Apr 2026

- Joined the Sherman fab build-out from day one and wrote its real-time dispatching (RTD) logic from zero, balancing throughput, cost, cycle time, and on-time delivery.
- Designed the lithography scheduling logic, including load-port and expression-based constraints earlier logic ignored.
- Automated reticle scheduling and reticle handling, cutting reticle wait time in the fab by 80%.
- Built a knowledge-base chatbot for night-shift operators: Vectara retrieval over MES troubleshooting docs, delivered in Webex, so operators get step-by-step MES fixes without waiting for day shift.
- Modified MES message structures and reports for integrated load/unload; resolved data mapping across 4,802 variations.
- Automated the daily dispatch-metrics email, reticle-delivery ETL, file-version checks, and dispatch-job migration across servers.

Founder & Lead Organizer — Dallas Chinese AI Community · Real Agent Use Cases (side project) — 2026 – Present

- Founded Dallas's first Chinese AI community (700+ members); 7 events Apr–Sep 2026, 246 cumulative attendees, 70 at the largest.
- Led a 40-person hands-on workshop: attendees built and ran their own email daily-brief workflow (inbox → prioritized to-do), then demoed their automations.
- Ran a 59-person beginner workshop for students and parents: turn a vague idea into a clear task, then finish a first project with ChatGPT.
- Organized a community hackathon and two OpenClaw agent meetups (40 and 70 attendees) on multi-agent workflows with Claude Code.
- Designed and taught Agent 101, a bilingual course where nontechnical attendees build a working Gmail agent from a template.

SELECTED PROJECTS

Live-stream host scheduling system — US TikTok Shop live-commerce agency (in production) — Aug 2026 – Present

- Replaced hand-dragged Lark spreadsheets and hand-written per-host plans; hosts submit availability via signed per-person links.
- Cloudflare Worker (KV + cron) reads scores, pair compatibility, hour limits, and room requirements from Lark Sheets, runs a constraint solver, and writes a draft schedule plus an explicit gap list back to Lark.
- The ops lead reviews and publishes; the system never publishes on its own. Admin panel, 21 regression tests, CI/CD, and a handoff doc for the next maintainer.

AI receptionist, voice + SMS — aimanjack.com (live) — Jul 2026 – Present

- OpenAI Realtime voice line and SMS agent share one tool set (check availability, create / find / reschedule / cancel booking) against a booking API on Cloudflare Pages Functions + Supabase Postgres.
- Double-booking is blocked in the database; every write texts a confirmation to both customer and owner. Answers in English, Spanish, and Chinese; quotes only approved prices and hands off the rest.
- Shipped with a public landing page, self-serve booking page, and a demo line anyone can call; the same SMS pattern is live at a DFW car dealership.

Open-source agent workflows & content site — github.com/qianquandong · realagentusecases.com — 2026

- real-agent-workflows (Obsidian content OS, 6 workflows), track-ai-visibility, booking-research-agent, all with human gates on send/publish; bilingual Next.js static site on Cloudflare Workers with automated publishing gates.

EDUCATION

B.S. Electrical Engineering, Minor in Mathematics — Texas A&M University, College Station, TX — May 2022

SKILLS

- Python, JavaScript / Node, SQL (Postgres / Supabase), Selenium, SAP GUI scripting (win32com), ETL, Cloudflare Workers / Pages / KV / D1, Next.js
- OpenAI & Claude APIs (function calling, Realtime), Claude Code, MCP connectors, Vectara (RAG), Webex bots, Twilio, Lark / Feishu and Notion APIs; agent design with dry-run defaults, human-in-the-loop gates, failure boundaries · English, Mandarin Chinese
